

Health, Safety and Environmental Training

Providing integrated solutions to suit your business needs

Course Title: **BOHS Proficiency Module P405 Management of Asbestos in Buildings**

Course Duration: **4 days**

Thank you for your interest in RPS Health, Safety and Environment training services.

By undertaking training with RPS, the leading Health, Safety and Environmental Consultancy in Europe, you will be able to achieve a level understanding and competence to meet the ever-increasing demands of legislation.

Course Syllabus

The British Occupational Hygiene Society (BOHS) P405 *Management of Asbestos in Buildings* is a 4-day course, which will consist of various PowerPoint presentations, videos, course aids plus accompanying notes. This course is designed to provide delegates with the practical knowledge and skill to be able to manage asbestos within buildings and to audit asbestos removal projects. The course structure follows a modular style approach that will allow the delegates to gain knowledge of the relevant Health and Safety topics. Topics covered include:

- Asbestos related Health and Safety legislation
- Asbestos materials in buildings
- Risk assessment of asbestos in buildings including management plans
- Asbestos removal management
- Role of external Laboratory/Analyst
- Practical work including practical assessment exercise

This course would suit all those who need a more detailed awareness of problems presented by presence of asbestos containing materials within buildings and those who will need to manage these problems, such as Facility Managers and Safety Managers. It includes assessed course work, including practical exercises (method statement evaluation, role playing and pre-start inspection) and concludes with a formal Multi-Choice Paper (MCP) examination, which takes place on the final afternoon of the course and is invigilated and marked by an external BOHS Examiner.

RPS Trainers are BOHS approved and have between 10 and 20 years experience with asbestos, two have Asbestos CCP status, two are Certified Occupational Hygienists and Corporate Members of the Institution of Occupational Safety & Health (IOSH) and one is a BOHS Examiner. Passing the course-work, MCP leads to a BOHS award in this subject. To allow for effective training the course will accommodate a maximum of 6 delegates.

Benefits

- Increased awareness of locations of ACMs in structures
- Increased awareness of correct sampling strategies and techniques
- Increased awareness of safety precautions including PPE use
- Increased awareness of correct risk assessments for ACMs
- Increased awareness of asbestos removal techniques
