

## Well Operations Project Management

RPS is the industry leader in the provision of integrated geological well operations services to the international oil and gas industry. Working across the complete spectrum of well drilling activity, from well planning and construction through well execution and management to post well project close-out, RPS has been involved in projects on more than 7000 wells in over 100 countries.

With capability ranging from specialist consultancy services and products through to full turnkey project management, RPS Energy's Well Operations Project Management consultancy provides a series of

solutions that deliver quantifiable results to improve operating efficiency, reduce well costs and safely achieve well objectives.

### What we provide

- Well design and construction
