

Reserves Reporting

RPS has extensive expertise in resource assessment and classification with the accounted commercial risks and uncertainties.

We are familiar with all of the classification schemes used by the oil and gas industry, and with all of the volume assessment techniques. In particular, we have considerable expertise and experience in assessing and auditing reserves to SEC, Canadian NI 51-101 and SPE standards. We have several engineers and geologists who are certified by the appropriate authorities and are hence approved to sign off on these assessments.

RPS undertakes studies on behalf of banks, financial institutions and petroleum companies all over the world to help them quantify the volumes of producible hydrocarbons that are associated with fields, discoveries, or prospects, including independent reporting in support of company flotations.

RPS has already established itself as a provider of reserves evaluation services for both operators and financial institutions

What we provide

■ Competent persons reports,

specifically for the UK alternative investment market (AIM) listings for many start ups with international assets

- Reserves assessment and reporting to SEC
- Reserves evaluation for UK independents for the purpose of independent verification for annual reporting
- Due diligence for financial institutions reviewing project finance in the UK continental shelf and elsewhere
- Due diligence for acquisition and divestitures, and mergers and acquisitions
